

# Preparation DASA DevOps Professional: Enable and Scale

Digital transformation is changing the face of businesses and will continue to do so. Organizations are being challenged to develop the ability to deliver the digital services their customers need to survive on the market. DevOps is the key to mastering this ability and maximizes the IT value flow to customers. DevOps creates an improved ability to design, develop, deploy and operate software and services. Higher customer satisfaction, better quality, faster delivery, more engaged staff and lower costs are all benefits.

## Why this DASA DevOps Professional: Enable and Scale training?

This DASA DevOps Professional: Enable and Scale (formerly known as DevOps Practitioner) training course provides the actual practitioners tasked with implementing and working according to the DevOps principles with the training they need to put DevOps successfully into practice. The course was developed to reinforce and hone the skills and knowledge areas needed to deploy DevOps in your organization. The DevOps Professional: Enable and Scale course focuses on improving the skill set of the DASA competency model, which includes competencies like Courage, Teambuilding, DevOps Leadership, and Continuous Improvement. This DevOps Professional: Enable and Scale training course builds upon the foundation laid by the DevOps Fundamentals course. The foundation consists of an in-depth introduction to DevOps and understanding the DevOps principles and Agile practices.

## What you will learn

The DASA DevOps Professional: Enable and Scale training includes practical examples and many exercises that help participants to understand how to apply the skills needed to practice DevOps. To this end, the training is highly interactive.

- **Courage:** The knowledge and practical skills required to do DevOps, including breaking down silos, taking end-to-end ownership, experimenting and innovating.
  - **Team building:** The skills and hands-on experience required to build high-performing teams that rely on trust, honesty and collaboration to allow them to act as cross-functional autonomous teams.
- 

- 
- DevOps leadership: The knowledge and expertise required to become a true practitioner capable of creating a culture and purpose with a focus on success while at the same time being a servant leader.
  - Continuous improvement: A DevOps mindset and the ability to facilitate the use of tools to build an environment for continuous improvement.

## Who should attend?
